## PREFACE

This report supplements [ ] Drovyanaya ICBM Complex, USSR,  
1/ prepared in response to CIA Requirement C-DI5-82,972 requesting detailed  
line drawings, to scale, of elements of the complex. The information contained  
herein is based on [ ] photography through [ ]  
[ ] Individual reports will be updated periodically to reflect changes observed  
on subsequent photography.

25X1

25X1

25X1

The precision target plots included in this report are mathematically recti-  
fied projections of the area. Plots are compiled by utilizing precision mensura-  
tion instruments, and interpretation is performed with the aid of stereoscopic  
viewing equipment. Identifiable image points are measured and their coordinate  
values mathematically transformed by computer. This transformation corrects  
for camera and attitude (pitch, roll, and yaw) induced distortions but does not  
correct for displacement due to ground relief and object height.

These target plots represent the most accurate data compiled to date, but  
the user is cautioned to exercise care in scaling distances or determining  
azimuths from these plots, inasmuch as relief can introduce errors in distance  
and alignment. The dimensions given are accurate to within [ ]  
[ ] whichever is greater.

**DROVYANAYA ICBM COMPLEX, USSR**  
**COMPLEX SUPPORT FACILITY**

The complex support facility for the Drovyanaya ICBM Complex is located at 51-32N 113-01E, in a wooded area approximately 3.1 nm south of the town of Drovyanaya. It consists of 2 major components about 1.0 nm apart. The northern component is predominantly an administration and housing area (Figures 1 and 2), and the southern component is predominantly a railhead and storage area (Figures 3 and 4). Rail service is provided by a branch line from the Trans-Siberian Railroad 17 nm to the north. The branch line, originally 30 nm long, now terminates at the rail-to-road transfer point approximately 1.5 nm south-southeast of the railhead and storage area. The original line has been abandoned south of the transfer point, and the section still in use has been improved by the elimination of excessive curves. The complex main road connects the facility with all launch sites and the transfer point.

Large quantities of construction materials, some of which can be identified as components for the Type IIID launch sites, have been observed in the railhead and storage area. Included in the materials identified are posts for security fencing around the launch sites, prefabricated concrete arches used in the construction of earth-mounded buildings, prefabricated concrete sections of the Type IIID launch silo, and prefabricated concrete sections used in the construction of the Type IIID launch control facility. The prefabricated construction materials probably are being produced at the concrete-processing building (Figure 4, Item 20) in the railhead and storage area.

The administration and housing area has been previously reported as an unidentified construction activity. The area has been constructed since [REDACTED] 25X1  
[REDACTED] A probable driver-training course is adjacent to the north side of the maintenance area.
